I will not be here tomorrow and will be unable to accept oil and grease due to the sampling requirements for the the bottles. This is still too much work for one person. Who decided that our lab take these samples.

Ron,

The samples would be spread out over two weeks and that is the only sampling anticipated at this time. I realize O&G has a short HT so that would be the priority. The anions, as I recall, have normal TAT for reporting so unless you have a lot of other samples this should be okay. Right?

These samples are really high in priority. Your support with this would really be appreciated!

We will have a meeting tomorrow to discuss the specifics. One item we talked about was to run Ortho Phos as a screen. If you want more information before tomorrow check with John C. since he was involved in those discussions.
